(54) AUCTION SYSTEM

## (57)Abstract:

**PURPOSE:** To project auction information on a screen provided in an auction place with a projecting device by generating an image by means of a data processing and executing the change over with the image of a sample, etc., which is image picked-up by means of a camera.

**CONSTITUTION:** A signal from an auction information input part 1 is processed into image data by a data processing part 2, synthesized with the image, etc., from the camera 3 by an auctioneer terminal equipment 4 and projected on the screen 6 in the auction place with a projecting display part 5. A purchaser ID, etc., is registered by a purchaser terminal equipment 7. Thus, the signal inputted from the above purchaser terminal equipment is recorded in the area of the above ID of a computer device 9 so as to be processed. The purchaser inputs purchasing by the purchaser terminal equipment while viewing the sample image and the information image on the screen. The data is processed in the order of a purchasing input by the computer device and transmitted to the auctioneer terminal equipment so that a selling/purchasing processing is executed.
